

## Miami Beach Edition

Architect: Nichols, Brosch Wurst Wolfe  
Acoustical Consultant: The Audio Bug  
Contractor: Coastal Construction

Miami Beach Edition is a first class hotel and residential urban resort. Early in the construction process, acoustical field testing was performed to determine if the demising walls complied with the performance specifications for sound transmission. Testing showed that noise was flanking around the partition wall through the curtain wall mullions causing the NIC performance to be well below the required rating. Mull-It-Over sound barrier mullion trim caps were installed to eliminate the flanking path and increase the NIC performance to exceed the specification requirements.
